2   Functions

Definition ($\texttt{annot} :: \tau \times \varepsilon \to \hat{\tau}$)

1. $\texttt{annot}(X, \_) = X$
2. $\texttt{annot}(\{\bar{r}\}, \_) = \{\bar{r}\}$
3. $\texttt{annot}(\tau_1 \to \tau_2, \varepsilon) = \texttt{annot}(\tau_1, \varepsilon) \to_\varepsilon \texttt{annot}(\tau_2, \varepsilon)$
4. $\texttt{annot}(\forall X <: \tau_1.\tau_2, \varepsilon) = \forall X <: \texttt{annot}(\tau_1, \varepsilon).\texttt{annot}(\tau_2, \varepsilon)\ \texttt{caps}\ \varepsilon$

Definition ($\texttt{annot} :: e \times \varepsilon \to \hat{e}$)

1. $\texttt{annot}(x, \_) = e$
2. $\texttt{annot}(r, \_) = r$
3. $\texttt{annot}(\lambda x : \tau.e, \varepsilon) = \lambda x : \texttt{annot}(\tau, \varepsilon).\texttt{annot}(e, \varepsilon)$
4. $\texttt{annot}(e_1\ e_2, \varepsilon) = \texttt{annot}(e_1)\ \texttt{annot}(e_2)$
5. $\texttt{annot}(e.\pi, \varepsilon) = \texttt{annot}(e, \varepsilon).\pi$
6. $\texttt{annot}(\lambda X <: \tau_1.e, \varepsilon) = \lambda X <: \texttt{annot}(\tau_1, \varepsilon).\texttt{annot}(e, \varepsilon)$
7. $\texttt{annot}(e\ \tau, \varepsilon) = \texttt{annot}(e, \varepsilon)\ \texttt{annot}(\tau, \varepsilon)$

Definition ($\texttt{annot} :: \Gamma \times \varepsilon \to \hat{\Gamma}$)

1. $\texttt{annot}(\varnothing, \_) = \varnothing$
2. $\texttt{annot}((\Gamma, x : \tau), \varepsilon) = \texttt{annot}(\Gamma, \varepsilon), x : \texttt{annot}(\tau, \varepsilon)$
3. $\texttt{annot}((\Gamma, X <: \tau), \varepsilon) = \texttt{annot}(\Gamma, \varepsilon), X <: \texttt{annot}(\tau, \varepsilon)$

Definition (erase :: $\hat{\tau} \to \tau$)

1. $\texttt{erase}(X) = X$
2. $\texttt{erase}(\{\bar{r}\}) = \{\bar{r}\}$
3. $\texttt{erase}(\hat{\tau}_1 \to_\varepsilon \hat{\tau}_2) = \texttt{erase}(\hat{\tau}_1) \to \texttt{erase}(\hat{\tau}_2)$
4. $\texttt{erase}(\forall X <: \hat{\tau}_1.\hat{\tau}_2 \ \texttt{caps} \ \varepsilon) = \forall X <: \texttt{erase}(\hat{\tau}_1).\texttt{erase}(\hat{\tau}_2)$

Definition (erase :: $\hat{e} \to e$)

1. $\texttt{erase}(x) = x$
2. $\texttt{erase}(r) = r$
3. $\texttt{erase}(\lambda x : \hat{\tau}.\hat{e}) = \lambda x : \texttt{erase}(\hat{\tau}).\texttt{erase}(\hat{e})$
4. $\texttt{erase}(\hat{e}_1 \ \hat{e}_2) = \texttt{erase}(\hat{e}_1)\texttt{erase}(\hat{e}_2)$
5. $\texttt{erase}(\hat{e}.\pi) = \texttt{erase}(\hat{e}).\pi$
6. $\texttt{erase}(\lambda X <: \hat{\tau}.\hat{e}) = \lambda X <: \texttt{erase}(\hat{\tau}).\texttt{erase}(\hat{e})$

Definition (erase :: $\hat{\Gamma} \to \Gamma$)

1. $\texttt{erase}(\varnothing) = \varnothing$
2. $\texttt{erase}(\hat{\Gamma}, x : \hat{\tau}) = \texttt{erase}(\hat{\Gamma}), x : \texttt{erase}(\hat{\tau})$
3. $\texttt{erase}(\hat{\Gamma}, X <: \hat{\tau}) = \texttt{erase}(\hat{\Gamma}), X <: \texttt{erase}(\hat{\tau})$

Definition (effects :: $\hat{\tau} \to \varepsilon$)

1. $\texttt{effects}(X) = \varnothing$
2. $\texttt{effects}(\{\bar{r}\}) = \{r.\pi \mid r \in \bar{r}, \pi \in \Pi\}$
3. $\texttt{effects}(\hat{\tau}_1 \to_\varepsilon \hat{\tau}_2) = \texttt{ho-effects}(\hat{\tau}_1) \cup \varepsilon \cup \texttt{effects}(\hat{\tau}_2)$
4. $\texttt{effects}(\forall X <: \hat{\tau}_1.\hat{\tau}_2 \ \texttt{caps} \ \varepsilon_1) = \texttt{ho-effects}(\hat{\tau}_1) \cup \texttt{effects}([\hat{\tau}_1/X]\hat{\tau}_2) \cup \varepsilon_1$
5. $\texttt{effects}(\forall \phi \subseteq \varepsilon.\hat{\tau} \ \texttt{caps} \ \varepsilon_1) = \texttt{effects}([\varepsilon/\phi]\hat{\tau}) \cup \varepsilon_1$

Defintion (effects :: $\hat{\tau} \times \overline{\hat{\tau}} \to \varepsilon$)

1. $\texttt{effects}(\hat{\tau}, \overline{\hat{\tau}}) = \texttt{effects}(\hat{\tau}) \cap \bigcup_i \texttt{effects}(\hat{\tau}_i)$, if $\hat{\tau}$ is polymorphic.
2. $\texttt{effects}(\hat{\tau}, \_) = \texttt{effects}(\hat{\tau})$, otherwise.

Note: the definitions given for non-polymorphic types could also be refined to give a more precise upper-bound on the effects they capture. This definition is also probably deficient when there is another polymorphic function in scope.

Definition (ho-effects :: $\hat{\tau} \to \varepsilon$)

1. $\texttt{ho-effects}(X) = \varnothing$
2. $\texttt{ho-effects}(\{\bar{r}\}) = \varnothing$
3. $\texttt{ho-effects}(\hat{\tau}_1 \to_\varepsilon \hat{\tau}_2) = \texttt{effects}(\hat{\tau}_1) \cup \texttt{ho-effects}(\hat{\tau}_2)$
4. $\texttt{ho-effects}(\forall X <: \hat{\tau}_1.\hat{\tau}_2 \ \texttt{caps} \ \varepsilon) = \texttt{effects}(\hat{\tau}_1) \cup \texttt{ho-effects}([\hat{\tau}_1/X]\hat{\tau}_2)$
5. $\texttt{ho-effects}(\forall \phi \subseteq \varepsilon.\hat{\tau} \ \texttt{caps} \ \varepsilon_1) = \varepsilon \cup \texttt{ho-effects}([\varepsilon/\phi]\hat{\tau})$

Definition (ho-effects :: $\hat{\tau} \times \overline{\hat{\tau}} \to \varepsilon$)

1. $\texttt{ho-effects}(\hat{\tau}, \overline{\hat{\tau}}) = \texttt{ho-effects}(\hat{\tau}) \cap \bigcup_i \texttt{ho-effects}(\hat{\tau}_i)$, if $\hat{\tau}$ is polymorphic.
2. $\texttt{ho-effects}(\hat{\tau}, \_) = \texttt{ho-effects}(\hat{\tau})$, otherwise.

Note: the definitions given for non-polymorphic types could also be refined to give a more precise upper-bound on the effects they capture. This definition is also probably deficient when there is another polymorphic function in scope.
